

How to Connect to TigerWiFi with Windows 7, 8, and 10

1. Open the Network and Sharing Center. You can do this by:
 - Right clicking on internet access icon located on the bottom right hand of the screen in the toolbar.
 - Another way is to type “network and sharing center” into the windows run box located on the bottom left hand of the screen.
 - Open up the control panel, click on “network and internet”, click on “network and sharing center”
2. Click “Set up a new connection or network”
3. Click “Manually connect to a wireless network”
4. Enter the Network name (SSID) “tigerWiFi”, select WPA2-Enterprise, Encryption type should be AES, and both check boxes should be enabled. Note: Leave security key blank.

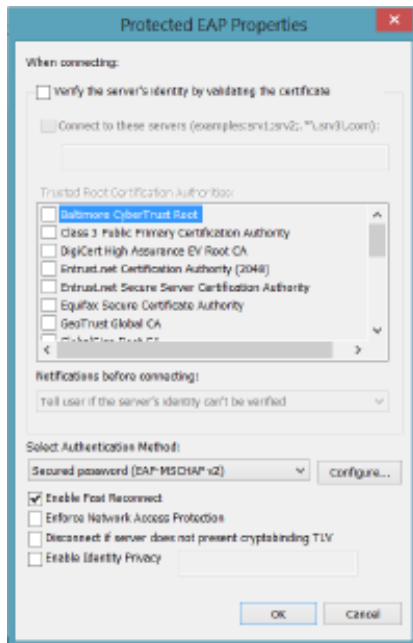

5. Click “Change Connection Settings”

6. Leave the connection tab as is. The options for connect automatically and connect even if the network is not broadcasting its name (SSID) should be enabled.
7. Click the security tab. The security type should say WPA2-Enterprise, Encryption type should be AES, the authentication method should be 'Microsoft Protected EAP (PEAP). The option for 'Remember my credentials' should be clicked.

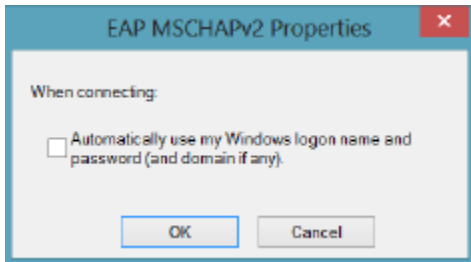

8. Click the settings button. Uncheck the 'Verify the server's identity' at the top.

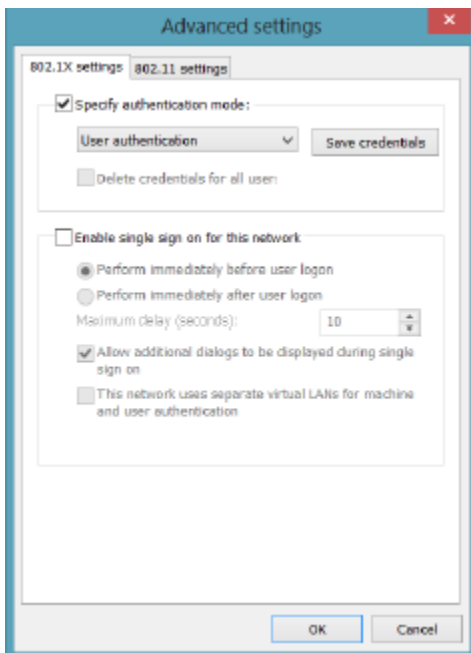

9. Then click the "configure" button. Under there make sure the checkbox for Automatically use my Windows logon name is not checked. Usually windows 7 will

enable this, and Windows 8 will not. Make sure it's off.

10. Click OK on the EAP MSCHAPv2 properties window.
11. Click OK on the PROTECTED EAP properties window.
12. You should be back on the tigerWIFI Wireless Network Properties. Click “Advanced Settings”
13. Enable “Specify authentication mode” and set it to “User Authentication”

14. Click OK on the Advanced settings page.
15. Click OK on the tigerWIFI Wireless Network Properties.
16. Click CLOSE
17. Click on your wireless icon at the bottom right of your screen, and, if prompted, click connect. You will now type your credentials, and click OK.
18. Your connection should complete and you should be ready to use tigerWIFI.
